Multiscreen Event Encoder

4K

Media Excel's HERO Event Encoder (HERO EE) is a low-latency, multi-channel, multi-format, multi-screen remote on-location encoding solution for broadcast of all your most important events, regardless of the venue.

When you want to broadcast remote events and need to push your content to multiple media outlets and formats, don't stop with the cameras, microphones and lighting. Be sure to remember the right encoding platform, one that can handle all your live streaming event production demands. The HERO Event Encoder's simple setup and comprehensive workflow deliver the live signal from the camera or switchboard to your local and global viewing audience - ON ANY DEVICE, ANY PLATFORM, ANYWHERE - enhancing your production value (video quality and service reliability), without breaking the budget.
